List - [] mutable

Collection of information in order
it can store different types
of Data type.

$l = [1, 2, 3.5, \text{"Hollo"}]$

Tuples - () immutable

it is immutable

$a = (1, 2, 3, 4, 5)$

$b = (3.5, 4.3, 5.2)$

Indexing $\rightarrow$ Start from Zero (0)

$a[0]$, $a[1]$, $a[2]$

using indexing we can retrieve or assign value.

Functions

A function is a reusable block of code that perform a specific task.

it Reduce duplication

keyword : `def`

ex. `append(n)`

`Pop()`

Slicing

it is used to access a portion or a part of sequences, such as string, list or tuples.

[Start, Stop, Step]

↓	↓	↓
indexing where it starts	indexing where it ends	No. of times it moves
inclusive	exclusive	

0 1 2 3 4 5 6

$a[:]$ copy the entire sequence.

$a[1:4]$ elements from index 1 to 3

$a[:3]$ first 3 elements.

$a[3:]$ from index 3 to end.

$a[::2]$ every second element.

$a[::-1]$ reverse the sequence.
